## PROFESSIONAL SUMMARY

QA Engineer with 2 years of experience, including 1.5+ years at Techsapphire owning the release test pass for two products across web, desktop and Android. Built and maintain a Python Selenium WebDriver suite validating 500+ live URLs per run, replacing approximately 70% of a manual regression pass, and intercepted 30+ critical defects before production. Also built ShopSphere, a full-stack application with a 916-test pytest and Playwright automation platform in CI.

## TECHNICAL SKILLS

**Languages and Frameworks:** Python, SQL, pytest, FastAPI

**Test Automation:** Selenium WebDriver, Playwright, Page Object Model, Data-Driven Testing, Parameterization, Test Fixtures, Automated Regression Testing, Retry and Redirect Handling

**Manual and Functional Testing:** Functional, UI, Regression, System, Smoke, Sanity, Integration, End-to-End, UAT, Re-testing, Test Execution, Test Case Design (Boundary Value Analysis, Equivalence Partitioning)

**API and Database Testing:** REST API Testing, API Automation, Postman, JSON, HTTP Response Validation, SQL Server, PostgreSQL, Database Testing, Backend Validation, Test Data Management

**Security and Advanced Testing:** Security Testing, Authorisation and IDOR Testing, JWT Validation, SQL Injection and XSS Testing, Contract Testing, Concurrency and Race-Condition Testing, Performance Testing (Locust)

**CI/CD and Tools:** GitHub Actions, Jenkins, Docker, Git, GitHub, JIRA, Allure, Excel Reporting, VS Code

**Methodologies:** Agile / Scrum, SDLC, STLC, Defect Life Cycle, Defect Management, Test Planning, Test Coverage

## PROFESSIONAL EXPERIENCE

**QA Engineer | Techsapphire, Panchkula**

Jan 2025 - Present

Agile / Scrum | 2 products | Web, Desktop and Android

- Own the release test pass for two products across functional, regression, smoke and sanity cycles.
- Intercepted 30+ critical defects before production, raising, tracking and retesting them in Jira across the full defect life cycle.
- Prepare test data and validate backend records with SQL queries during test execution and defect reporting.

**Restaurant Monitoring System - Selenium WebDriver Automation**

- Built and maintain a Selenium WebDriver suite in Python validating 500+ live URLs per run with retry, timeout and redirect-chain handling, replacing approximately 70% of the manual regression pass.
- Automated run reporting in Excel (result, failure reason and timestamp per case), removing manual test-report preparation from every cycle.

**Offline Document and Note-Taking Application - PWA on Desktop and Android**

- Test offline-first behaviour across desktop and Android, covering PWA install, cold start and no-network use, plus split-screen document and canvas workflows (highlighting, area clipping, notes, PDF-to-canvas links).
- Validate OCR output on scanned and image-only pages across multiple languages, confirming recognised text is selectable and searchable.

**Data Science Intern | Hoping Minds, Mohali**

Jan 2024 - Jun 2024

- Built predictive machine learning models in Python and Pandas, achieving approximately 30% accuracy improvement over the baseline model, and automated ETL pipelines to reduce manual data-processing effort.

## PROJECTS

**ShopSphere: E-Commerce Application and Quality Engineering Platform | Personal Project**

Jun 2026 - Aug 2026

Python, FastAPI, PostgreSQL, React/TypeScript, Playwright, pytest, Docker, GitHub Actions, Allure

- Built a full-stack e-commerce application and a 916-test automation platform around it, covering unit, API, database, contract, security, integration and Playwright UI layers.
- Found and fixed a concurrency defect that allowed overselling, where two simultaneous checkouts both bought the last unit in stock.
- Wrote 227 security tests (authorisation, IDOR, JWT forgery, SQL and XSS injection, data exposure), which surfaced an unhandled HTTP 500 reachable by any anonymous user with a single NUL byte.
- Designed the suite for isolation and speed using Page Object Model, reusable API clients, factory-generated test data and zero time.sleep, cutting the backend suite from 376s to 140s (2.7× parallel speed-up).
- Automated a staged GitHub Actions CI pipeline (lint, unit, API/database/contract/security, UI, Docker build validation) with merged Allure reporting and screenshots, videos and Playwright traces captured on failure.

## EDUCATION

**B.Tech, Computer Science Engineering | Chandigarh Engineering College | CGPA 8.10/10**

Aug 2020 - Jun 2024

## CERTIFICATIONS

- [Advanced Selenium: Automation Frameworks](#) - LinkedIn Learning (2026)
- [Playwright Essential Training: Abstractions, Fixtures, and Complex Scenarios](#) - LinkedIn Learning (2026)
- [Jenkins Essential Training](#) - LinkedIn Learning (2026)
- [Career Essentials in Generative AI](#) - Microsoft and LinkedIn (2024)
- ISTQB Certified Tester Foundation Level (CTFL) - in preparation
